

feeltone™

**Sound massage bed, novelty 2006**

Allows you to tune into and join the sound, for a holistic massage of the body, to achieve relaxation and integration. Extra long strings create a deep calming sound carpet with 2 Octaves and 3 sound qualities. For the tuning, the instrument can be turned around its axes, by loosening 4 screws. Now the instrument can be played actively, for example with single bridges as a Koto, diatonic or chromatic tuned. It can also be played with a violin bow. Special wishes can be realized for the feet.

*At the Hospital I am working, I had the possibility to work with the sound wave with stroke patients and patients that had surgery. The patients with limbs that were numb who did get treatment with the Sound wave recovered faster and regained permanent sensibility in their limbs much faster than patients that were not treated.*

 Music Fair, Frankfurt

- KLL-1** low version, surface height 15.75 inch, 70 strings, sound range G-H / g-h, 83.5 x 29.1 x 24.4 inch
- KLL-2** high version, surface height 31.5 inch, 70 strings, sound range G-H / g-h, 83.5 x 29.1 x 24.4 inch
- KLL-FUS** Exchange Foot for the sound bed, top surface 32" high

*I wish for a sound bed where the height can be adjusted with a motor in the hospital where I work with my patients (Multiple Sclerosis, wheel chair, persistent vegetative state). This would allow me to move a patient more easily onto the bed and then bring the bed to a height were I can play most comfortably.*
