

### Remo Drum

The body of the Remo drums are built out of a special material called Acousticon. This material is a synthesis of cylindrical cardboard mixed with resins. This intense manufacturing process makes the body of a Remo drum nearly indestructible. The drum skins are the same material that Remo has been using for over 45 years of drum making. These drums are extremely durable and do not change pitch with humidity. They hold their tone in any kind of weather.

### Ocean Drum

Ocean Drums are two headed frame drum. One head is see through and one is a white skin. They are filled with thousands of small steel shots which produce varied, ocean surf sounds. Comes with a Mallet. Height 2.8 inch.

- WT-0** small, Ø 14 inch
- WT-1** medium, Ø 16 inch
- WT-2** large, Ø 22 inch

### Sparkle Ocean Drum

With colored balls

- WT-SP** mini with Sparkle effect and colored balls  
Ø 9 inch, height 1 inch

*Ocean Drum. Starting at the bottom, moving carefully and tenderly, the ocean starts to roar. Through the rocking motions guided by the resulting sound, the metal balls inside the drum create the sound. The ocean rocks more and more and then disappears again in silence.*

Michael Reimann, Multiinstrumentalist and Producer

 Engelskirchen

### Buffalo Drum

Single head frame drum with special rough-finish. These drums have a rope cross-suspension on the back as a handle. This drum has a great deep bass sound, and a waterproofed skin which allows the drum to be used outside, independent of the weather conditions.

Comes with a Mallet. Height 3.6 inch.

- BUD-25** Ø 10 inch
- BUD-30** Ø 12 inch
- BUD-35** Ø 14 inch
- BUD-40** Ø 16 inch
- BUD-55** Ø 22 inch
